2. This brochure illustrates some of DARCOM's MM&T Program Accomplishments. It presents the achievements by Major Subordinate Commands with emphasis on illustration of the types of projects pursued. The format of this brochure has been somewhat modified for this issue in accordance with the increased emphasis on implementation. Projects that have anticipated benefits and implemented efforts with actual benefits have been placed in separate sections to provide a clear distinction between them. A summary has been provided as the first section of the document to provide an overview.
3. Further information on the projects illustrated in this brochure should be obtained from the MM&T representatives, project officers shown, or from Mr. James Carstens, Chief, Manufacturing Technology Division, AV 793-5113.

INTRODUCTION

The Army Manufacturing Methods and Technology (MMT) Program was begun in 1964. The purpose of the program is to develop new manufacturing processes that can be applied to the production of Army items. Over the years hundreds of these projects have been funded and used to develop new technology. This brochure records the results of some of those projects.

Much literature has been written concerning the transfer of technology from the "laboratory" to actual production. It is often difficult to make this transition; however, the full benefits of new technology can be obtained only if this transition has been made. The Army is placing more emphasis on technology transfer to attain greater project benefits. This brochure is widely distributed throughout the Army in order to publicize the results and disseminate knowledge to potential users. Other methods of accomplishing this transfer are through end of project demonstrations; preparation of technical reports, project summary reports, and technical notes; and, through inclusion of technology information in bulletins and journals. All of these techniques, however, serve only to disseminate the information. Real benefits can only accrue once the new technology is implemented.
